

Deliverable 1.1: Framework Selection Report

1. Project Overview

The Pangasinan Heritage Digital Showcase is a responsive website designed to present heritage destinations in Pangasinan. For this version, the showcase features Cape Bolinao, Balungao Hot Spring, and Cabongaoan Beach. The project uses reusable components and is intended to provide an organized and accessible experience across desktop, tablet, and mobile devices.

2. Framework Options

Option A – React + Next.js 14: React is a component-based JavaScript library, while Next.js provides a framework for building React applications with routing and rendering features.

Option B – Vue + Nuxt.js 3: Vue is a component-based JavaScript framework, while Nuxt.js 3 provides application structure, routing, and rendering capabilities for Vue projects

3. Quantitative Comparison

Criteria	Weight	React + Next.js 14	Vue + Nuxt.js 3
Bundle Size & Performance	20%	8	9
Developer Velocity	15%	8	9
Ecosystem Maturity	15%	10	8
Learning Curve	10%	7	9
Component Architecture	15%	9	9
Documentation & Community	15%	10	9
Project Suitability	10%	8	10
Weighted Total	100%	8.55/10	9.05/10

4. Why Vue + Nuxt.js 3 Was Selected

Vue + Nuxt.js 3 was selected because it is well suited for the Pangasinan Heritage Digital Showcase. The project requires a responsive and visually organized website that presents heritage information using reusable components. Vue's component-based structure works well with the Atomic Design approach, allowing the interface to be divided into reusable atoms, molecules, and organisms. Nuxt.js 3 also provides a structured development environment and supports efficient rendering for a content-focused website. Compared with React + Next.js 14, Vue + Nuxt.js 3 offers a simpler development approach while still providing the features needed for this project. Therefore, it is the more appropriate framework for developing the Pangasinan Heritage Digital Showcase
